

Features	Benefits
Suggestive Selling	You can create order profiles in the Back Office that run on the POS. When customers order certain items, the POS displays suggestive selling prompts right on the order screen.
Combo Meals	Order components of a combo meal anywhere in an order using the dual mode Combo Meals feature. The POS sends the right items to prep and calculates the bill accurately.
General Reports	Create customized Daily Summary Reports (DSR) using Digital Dining's General Reports feature. Import data from existing spreadsheets directly into our general reports during automated end-of-day reporting.
Time and Attendance	Digital Dining allows staff to clock in right at the POS and assigns proper pay rates and POS features based on each staff member's department. Eliminate "buddy clock ins" with the integrated Fingerprint ID.
Labor Cost Reporting	Identify and resolve labor issues quickly using flash reports at the POS. Our detailed cost analysis reports help you plan and control labor costs.
