Quick & Counter Service

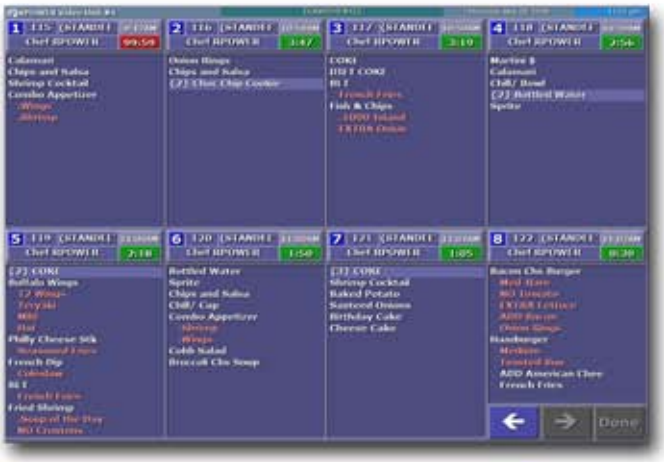
rPOWER™ RESTAURANT POS

Quick Service and Counter Operations

RPOWER's Quick Service and Counter Operations functionality increases operator efficiency and accuracy, speeding up customer time at the register. RPOWER has built in several features tailored to improve your point-of-sale performance and maximize your return on investment. RPOWER can accommodate a secondary LCD at each register for looping video advertisement without costly needs for third party software. The RPOWER Polebug, a virtual pole display depicted on the customer facing LCD, removes the additional cost of a traditional customer pole display. RPOWER Flashpay allows for small dollar credit card transactions to process without the need for printing or signature capture. Couple these features with RPOWER's Customer Rewards Programs as well as its system reliability and see what a powerful point-of-sale system can do for your establishment.

Virtual Pole Display

The RPOWER Polebug is a virtual customer display that mirrors traditional customer displays, always showing item dollar amounts and customer totals as the order is being placed. The RPOWER Polebug has been designed to run simultaneously with looping video for customer facing LCDs. Not only does this remove the costs of a traditional pole display unit, it also opens endless opportunities for customer video marketing without the costs of additional software components.



Kitchen Video Display Systems

Go paperless! RPOWER's Kitchen Video Display System requires no third party integration or additional workstations. KDS runs as a secondary terminal from your already existing point-of-sale workstation. Features include: Bump-bar or Touch-screen controlled, bump-forwarding (to secondary KDS terminals or printers), bump-dependency, and check recall. Checks display running time, server, table name, and items with quantity notation and modifiers. Bring your orders visually into the kitchen with RPOWER's own Kitchen Video System.

Employee Training

RPOWER allows any terminal on the network to be easily converted into Training Mode providing new employees with valuable POS exposure time during their training cycle. Training Mode utilizes the same menu configuration and order processes identical to the live system while keeping all training transactions completely separate from normal restaurant operations. RPOWER also provides multi-site chains with no-cost training licenses for corporate training centers.
